PROJECT REPORT

- **Digital Literacy Portfolio**

Course Code : CSE0001

Course Title: DIGITAL LITERACY

Submitted By: SUWID SHREYANSH

Registration Number: 25BHI10105

Branch: B.TECH CSE HEALTH INFORMATICS

Year: FIRST YEAR

Role: STUDENT DIGITAL AMBASSADOR

University: VIT BHOPAL UNIVERSITY

INTRODUCTION

In today's fast-changing digital world, students are expected not only to use technology but also to understand it responsibly. As a Student Digital Ambassador, I see my role as someone who can guide others in using digital tools wisely while maintaining a safe and professional online presence. This project gave me a practical opportunity to explore these aspects in a structured way.

By completing the five modules, I worked on creating digital content, building professional profiles, improving communication skills, and understanding cyber safety. Each task was not just an assignment but a learning experience that helped me become more confident in navigating the digital environment. Overall, this project strengthened my awareness of how technology can be used effectively for both academic growth and personal development.

TASK 1: DIGITAL LITERACY AWARENESS INFOGRAPHIC

For this task, I created an infographic using Canva based on the topic *Digital Literacy for Students*. The main aim of my design was to spread awareness about how students can use digital platforms safely, responsibly, and effectively. In my infographic, I included key areas such as online safety, digital communication, use of digital tools for learning, digital footprint, and responsible use of social media.

While designing the infographic, I ensured that the content was simple, clear, and easy to understand. I used short points, appropriate icons, and a balanced color scheme to make the design visually appealing. My focus was on presenting useful information in a structured way so that students can quickly understand and apply it in real life.

One challenge I faced was organizing all the important information within limited space without making the infographic look cluttered. However, this helped me improve my ability to prioritize key points and present them effectively.

The most interesting part of this task was learning how to communicate ideas visually instead of using long text. Overall, this activity enhanced my creativity and helped me understand the importance of visual communication in spreading awareness.

TASK 2: Student Digital Portfolio

In this task, I created and updated my profiles on platforms such as GitHub, LinkedIn, and Kaggle to build a strong digital presence. These platforms are widely used by students and professionals to showcase their skills, projects, and achievements. GitHub allows me to upload and manage my projects, LinkedIn helps in building professional connections, and Kaggle provides a platform to explore data science and improve problem-solving skills.
While setting up these profiles, I ensured that the information was clear, professional, and relevant to my academic background. This task helped me understand the importance of maintaining a clean and organized online identity.
Over the next four years, I plan to regularly update these platforms by adding new projects, learning new skills, and engaging with online communities. This will not only help me track my progress but also improve my chances of securing internships and job opportunities in the future.

TASK 3: Coding & Collaboration Platforms

For this task, I explored both coding practice platforms and online collaboration tools to understand their practical use in student life. In the first part, I created an account on HackerRank and solved a beginner-level problem. This activity helped me develop basic problem-solving skills and understand how coding platforms work. Although the problem was simple, it required logical thinking and careful implementation, which made it a valuable learning experience.

In the second part, I created a Google Form titled *Digital Literacy Awareness Quiz*. The form consisted of five questions, including both multiple-choice and short-answer types, based on topics like online safety and digital practices. I also observed how responses are automatically recorded and organized in Google Sheets, making it easier to analyze data.

This task helped me realize the importance of such platforms in academics. Coding websites support skill development, while tools like Google Forms are useful for collecting information and conducting surveys. Overall, this activity improved my understanding of how digital tools can be effectively used for learning and collaboration.

TASK 4: Email Etiquette & Communication

This task helped me understand the importance of maintaining professionalism while communicating in academic and professional environments. I drafted two formal emails—one addressed to a professor requesting an extension, and another to an internship coordinator expressing interest in an opportunity. While writing these emails, I ensured that each message included a clear subject line, polite tone, and a well-organized structure.

I also realized how poor communication can lead to misunderstandings and create a negative impression. For instance, sending emails without a proper subject or using informal language can reduce clarity and may even result in the message being ignored. Such mistakes can affect opportunities and delay responses.

Through this activity, I learned that effective communication depends not only on the content but also on how it is presented. This task improved my ability to write clear and professional emails and increased my confidence in formal communication.

Task 5: Cybercrime Awareness

In this task, I studied common cybercrimes, with a focus on phishing and online payment fraud. One of the most surprising aspects was how small mistakes, such as clicking on suspicious links or sharing sensitive information, can lead to serious consequences. It made me understand that a lack of awareness is a major reason why many people fall victim to such scams.

As part of the task, I also prepared a prevention checklist that includes simple and practical measures to stay safe online. This helped me recognize the importance of being alert and cautious while using digital platforms.

After completing this task, I have become more careful while handling online activities, especially financial transactions. I will avoid trusting unknown sources and will always verify information before taking any action. Overall, this task significantly improved my awareness and encouraged me to follow safer digital practices in daily life.

Conclusion

This project taught me a lot and helped me understand digital literacy better and how important it is in everyday life. I learned how to make digital content, use online tools well, build a professional presence, and improve my communication skills by doing different tasks.

I also learned more about the risks of the internet and how to stay safe while using digital platforms, especially when interacting and doing business online. These lessons have made me more responsible and careful when I'm online.

Overall, this project has made me feel more confident about using technology well and has pushed me to follow safe, moral, and smart digital habits that will help me in school and in my future job.
